

the fact that the *Journal of the American Medical Association* (JAMA) has been the most widely cited journal in the field of medicine for over 100 years (Roberts, 2000).

There are a number of reasons why the JAMA has been so successful. First, it has a long history of publishing high-quality research. Second, it has a strong reputation for being a leading journal in the field of medicine. Third, it has a large and diverse readership. Fourth, it has a strong focus on clinical research. Fifth, it has a strong focus on the latest research in the field of medicine.

The JAMA has been successful because it has been able to maintain a high level of quality and relevance. It has been able to do this by publishing research that is both scientifically sound and clinically relevant. It has also been able to do this by maintaining a strong focus on the latest research in the field of medicine.
